

Cloud Services Fabric – Extend Intelligent Access to SaaS and Multi-Cloud

Scalable, Distributed, Multi-service Cloud Fabric

Rise of the remote workforce, increasing use of multi-cloud, along with the proliferation of distributed edge computing, creates significant connectivity and security challenges for enterprises mandating the need for resilient and flexible architectures.

Infiot Cloud Services Fabric provides remote users/sites and devices secure and optimized connectivity to any cloud, extending high-performance connectivity, zero trust security and edge compute from people, places and things anywhere.

Provision Within Minutes

Cloud Services Fabric drastically reduces provisioning times and eliminates DIY builds

On-demand and Scalable

Take advantage of globally-available and horizontally scalable network of clouds to drive your business

Zero Trust Security and Edge Computing

Benefit from hyper connectivity, zero trust security, and edge compute for SaaS and multi-cloud

Secure, Integrated, Enterprise Class Services

Secure Optimized Cloud Onramp

Secure optimized cloud on-ramp to most popular SaaS, IaaS and multi-clouds, with all of the simplicity enterprises really need

Zero Trust Network Access as-a-Service

Adaptive Software Defined Perimeter that enables secure network access with granular control of traffic flow and isolated trust boundaries

Simple. Secure, Scalable - Converged. Cost-effective

Robust architecture with 4G/5G support and edge compute converges wide range of services in a thin edge form factor, drives simplicity and reduces costs of DIY connectivity and security services by 8-10x

Globally Distributed, Cloud-Native SDN Delivers Elastic-Scale

Cloud First

Designed to scale SDN using modern cloud-native principles. Migrate away from traditional DIY SDN with an agile, cloud-native management and controller

Secure and Compliant

Take advantage of a completely compliant architecture supporting HIPAA and PCI DSS 3.2.1 for all deployments

Leverage Network of Cloud Services

Globally distributed, horizontally scalable, multi-service network that interconnects users, devices, sites, to the cloud. InfioT™ Cloud Service Fabric (CSF) empowers enterprises to take advantage of globally-available Network of Cloud

Agile IT Management At Your Fingertips

Cloud Scale Visibility and Control

Deploy, configure, and achieve visibility from anywhere through InfioT's centralized management portal. Say goodbye to unnecessary man-hours, and eliminate complexity.

Improved Business Outcomes

Avoid legacy builds and extensive training for IT with InfioT's intuitive, policy-driven, and versatile cloud-management platform.

Gain Proactive Insights

A single dashboard to provide in-depth analytics and historical insights for troubleshooting connectivity, zero trust security, and distributed compute across all multi-cloud environments.
